

Houses of Worship

Full-Service Energy Efficiency Services for Building Owners

This program is designed to help houses of worship reduce their energy use and costs. Elevate Energy offers a complete assessment of the building, expert advice on the best energy efficiency improvements, financing options, and construction management and oversight. The program staff from Elevate Energy will also follow up after work is complete to ensure that energy savings are achieved. The program staff is there to help every step of the way, making it easy and affordable for religious communities to implement building upgrades.

Services

Energy Assessment

An expert energy analyst will conduct an on-site assessment of each participating facility. This will involve gathering information on how the building is used (for example, typical occupancy and operating hours), and about the building structure, systems, and equipment. This typically involves inspection of heating, cooling and ventilation systems, lighting, water heating equipment, plug load, and structural elements such as the roof, walls, windows, doors, and foundation.

Assessment Report

The energy analyst will provide a customized report recommending the most cost-effective energy efficiency improvements for your facility along with any relevant health and safety recommendations. The report lists recommended upgrades prioritized by estimated savings and payback.

Financing

Elevate Energy will offer financing options, and find and apply for rebates, grants, and incentives to help cover the cost of the building improvements.

Construction Management and Oversight

Expert building analysts will assist throughout the construction process. We help you develop a plan to implement energy improvements, work with building managers to review bids from contractors, and assist in scheduling and monitoring installation work.
